
Title

Last updated: Fri, 11 Apr 2025 19:00:35 GMT

Learn how to use the Title config.txt directive to start a new database stanza and specify a title to associate with the stanza in EZproxy.

Title starts a new database stanza and specifies a title to associate with the stanza. **Title** is used only once per database stanza and interacts with database stanzas, groups, interface directives and IP ranges. The scope of **Title** is the current database stanza. It is a position dependent config.txt directive and can be viewed on the EZproxy Menu Page.

Qualifiers

QUALIFIER	DESCRIPTION
<i>text</i>	Specifies the title to associate with the database stanza. The title appears in various EZproxy administration pages and conditionally appears in the EZproxy Menu page unless the -Hide option is included.

Options

OPTION	DESCRIPTION
-Hide	-Hide specifies that this stanza should be suppressed in the EZproxy Menu Page.

Syntax

| Title [-Hide] *text*

Examples

Two database stanzas, the second of which will be hidden from the EZproxy Menu Page but which can still be accessed using a Starting Point URL.

```
| Title Some Database
| URL http://www.somedb.com
| D somedb.com
```

Title -Hide *Other Database* hidden from EZproxy Menu
URL <http://www.otherdb.com>
D *otherdb.com*
